

Gabriel Franco Josino da Silva

Sao Paulo, Brazil · +55 11 95881-4398 · ds.gabrielfranco@gmail.com · [LinkedIn](#) · [GitHub](#) · [Portfolio](#)

Data Engineer with experience in SQL, Python, PySpark, Databricks, Delta Lake, data pipelines, automation, and technical documentation. Hands-on background in corporate banking environments, focusing on data treatment, transformation, validation, financial business rules, and reliable data delivery for internal teams.

SKILLS

Languages	Python, SQL, PySpark
Data stack	Databricks, Delta Lake, Oracle/Exadata, Power BI
Operations	Control-M, Git, GitHub, CI/CD basics, Jira, Confluence
Focus areas	Batch pipelines, data validation, financial parameterization, documentation, automation

PROFESSIONAL EXPERIENCE

Data Engineer · BRQ Digital Solutions

Oct 2024 - Present · Sao Paulo, Brazil · Hybrid

Allocated to F1rst/Santander · Financial MIS · BackOffice Squad

- Develop and maintain data pipelines with PySpark on Databricks.
- Create and maintain SQL business rules for data treatment, transformation, and validation.
- Support data modernization initiatives between traditional environments and cloud platforms.
- Use Delta Lake to organize and process data in a Lakehouse architecture.
- Build Python automations to support internal processes and reduce manual work.
- Work with Git/GitHub, technical documentation, and maintainability practices.
- Interact with business stakeholders, POs, and backoffice teams to define and validate rules.

Data Analyst Intern · Santander Brasil

Oct 2023 - Oct 2024 · Sao Paulo, Brazil · Hybrid

Insurance and Assistance Platform

- Queried, treated, and joined data in Databricks using SQL and PySpark.
- Developed Python automations for data treatment and preparation.
- Built Power BI dashboards for business indicator monitoring.
- Standardized, cleaned, and normalized datasets for management reporting.
- Supported internal teams with data analysis, reports, and business studies.

RELEVANT PROJECTS

Databricks Data Engineering Pipeline

Development and maintenance of pipelines focused on data treatment, transformation, standardization, and delivery for internal business consumption.

Technologies: SQL, PySpark, Databricks, Delta Lake, Python

Data Process Modernization and Maintenance

Adjustments, refactoring, version control, technical documentation, and process improvements to increase reliability and supportability.

Technologies: Python, SQL, PySpark, Databricks, Git, GitHub, CI/CD, Confluence

EDUCATION

FIAP · Technologist Degree in Data Science · Feb 2023 - Dec 2024

Practical education focused on Python, SQL, statistics, machine learning, data analysis, modeling, and pipelines.

CERTIFICATIONS

- Databricks Academy Accreditation - Get Started with Databricks for Data Engineering
- Databricks Academy Accreditation - Databricks Fundamentals
