

Gabriel Franco Josino da Silva

Data Engineer | PySpark | SQL | Databricks | Delta Lake | Python | Financial Data Pipelines

Sao Paulo, Brazil | Open to full remote data engineering roles
+55 11 95881-4398 | ds.gabrielfranco@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

Data Engineer with hands-on experience in banking data environments, working with SQL, PySpark, Databricks, Delta Lake, Python automation, batch job monitoring, and business-facing data delivery. Experienced in translating financial business rules into maintainable data transformations, supporting data modernization from traditional environments to cloud platforms, and documenting processes for reliable support. Currently expanding skills in Airflow, GitHub Actions, CI/CD, and cloud data engineering to grow into stronger full remote and international data engineering roles.

CORE SKILLS

Languages	SQL, Python, PySpark
Data platforms	Azure Databricks, Delta Lake, Oracle/Exadata, Power BI
Operations	Control-M monitoring, Git, GitHub, CI/CD fundamentals, Jira, Confluence
Data engineering	Batch pipelines, ETL/ELT, data validation, financial parameterization, documentation, automation
Learning focus	Airflow, GitHub Actions, Azure Databricks certification path, Spark performance

PROFESSIONAL EXPERIENCE

Data Engineer - BRQ Digital Solutions

Oct 2024 - Present | Sao Paulo, Brazil | Hybrid

Allocated to F1rst/Santander | Financial MIS | BackOffice Squad

- Develop and maintain PySpark data pipelines in Databricks for financial data processing and internal business consumption.
- Create and maintain SQL business rules for fixed-income products, including data treatment, transformation, validation, and parameterization.
- Support modernization of data processes between on-premise environments and cloud lakehouse platforms using Databricks and Delta Lake.
- Work with Oracle/Exadata integrations and maintain data processing routines connected to financial calculation drivers.
- Monitor and troubleshoot batch jobs with Control-M, including job status tracking, log analysis, and operational support for existing workflows.
- Build Python automations to support financial parameterization processes and reduce repetitive manual work.

- Collaborate with POs, backoffice teams, and business stakeholders to define, validate, and document data rules.

Data Analyst Intern - Santander Brasil

Oct 2023 - Oct 2024 | Sao Paulo, Brazil | Hybrid

Insurance and Assistance Platform

- Queried, treated, and joined datasets in Databricks using SQL and PySpark across silver and gold data layers.
- Built Power BI dashboards connected to Databricks to support insurance business indicators and management reporting.
- Developed Python automations for text and Excel file processing, reducing manual preparation before dashboard consumption.
- Cleaned, standardized, and normalized datasets involving products, regions, payers, debtors, and credit analysis.
- Supported internal analytics requests using Databricks, on-premise query environments, Jira, and Pipefy.

SELECTED WORK

Financial Data Pipelines and Business Rules

Development and maintenance of SQL and PySpark routines for financial data treatment, parameterization, validation, and delivery to internal teams in a banking environment.

Technologies: SQL, PySpark, Databricks, Delta Lake, Python, Oracle/Exadata, Control-M

Certification Simulator App - Portfolio Project

Active prototype for certification practice, built with Next.js, TypeScript, Tailwind, and Supabase. The next planned step is to add analytics around attempts, weak topics, learning progress, and data modeling.

Technologies: TypeScript, Next.js, Supabase/PostgreSQL, product analytics roadmap

EDUCATION

FIAP | Technologist Degree in Data Science | Feb 2023 - Dec 2024

Practical education focused on Python, SQL, statistics, machine learning, data analysis, modeling, and pipelines.

CERTIFICATIONS

- Databricks Academy Accreditation - Get Started with Databricks for Data Engineering
- Databricks Academy Accreditation - Databricks Fundamentals
- PCP Federado - Low Platform - F1rst
- In progress: Databricks Certified Data Engineer Associate study path

- Planned: GitHub Actions, Microsoft Azure Databricks Data Engineer Associate, Airflow Fundamentals

LANGUAGES

- Portuguese: Native
- English: Intermediate, actively improving for remote and international data engineering work
